

ALmatic is a semi-automatic applicator of self-adhesive labels for cylindrical products. Its easy functioning provides for the manual loads of the product in the labelling position by the operator who activates the control lever. So ALmatic provides to the rotation of the product and to the application of the label till a completely happened adhesion.

Thanks to the ergonomics of the system and to the presence of templates of comparison, ALmatic allows an exact labelling, making easier the manual operations of placing the product. The speed of the label supply, 12 mt/min, allows effecting its application in a very short time.

ALmatic can apply labels up to 200 mm wide on products with variable diameter from a minimum of 25 mm to a maximum of 110 mm. The format change is made in a fast and intuitive way through some simple sliding levers with block pommels. The industrial structure of the system, characterised from an unwind unit of 280 mm diameter with a tensioning arm, a paper traction group and silicon rewinder, guarantee a big reliability and continuous precision at the beginning and the end of roll and high autonomy.

In the end, ALmatic can be supplied of some optional devices like the transparent labels sensor or the hot foil printing unit for lots numbers and/or expiry dates, that increase the versatility of the system.

Maximum products diameter - 110 mm

Minimum products diameter - 25 mm

Maximum products height - 350 mm

Maximum labels width - 200 mm

Maximum labels length - 350 mm

Application speed - 200 mm/sec

Labels roll diameter - 280 mm

Power supply - 230V 50 Hz

Option: hot foil group, transparent label sensor
